Deviation from TN1260 in pullup:  
values for BOM simplification.  
Correct values should be 1k  
but 1.1k is used.

pullups for Master SPI (MSPI) required by  
TN1260: lattice ECP5 sysCONFIG guide p.6

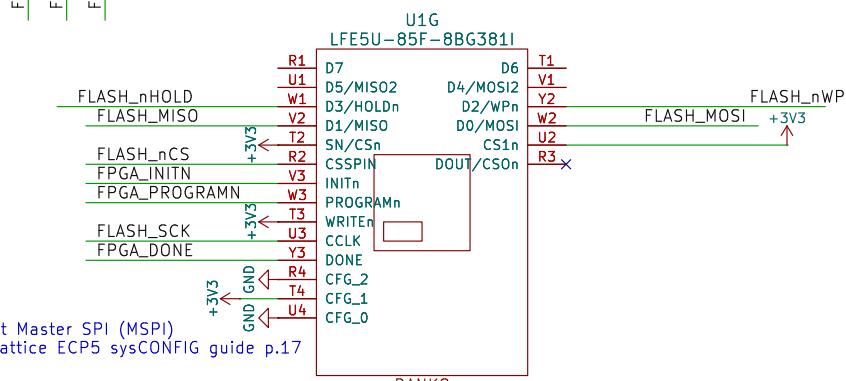

pullups to allow entering USER mode  
TN1260: lattice ECP5 sysCONFIG guide p.6, p.8, p.13

For programming Flash thru JTAG see  
Lattice FPGA-TN-02050

CFG select Master SPI (MSPI)  
TN1260: lattice ECP5 sysCONFIG guide p.17

Some address lines for A[0:15] are better placed on this port.  
Pins used are general I/O ports when not in use. See Section 4.1 ECP5 Datasheet

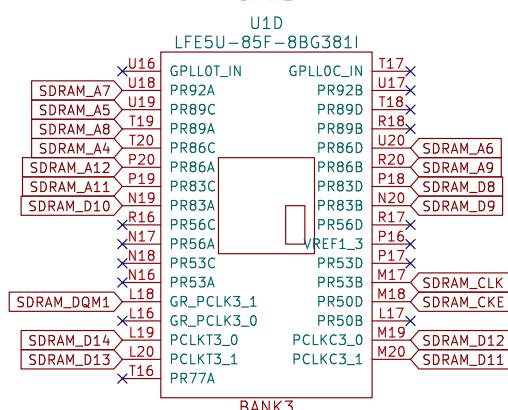

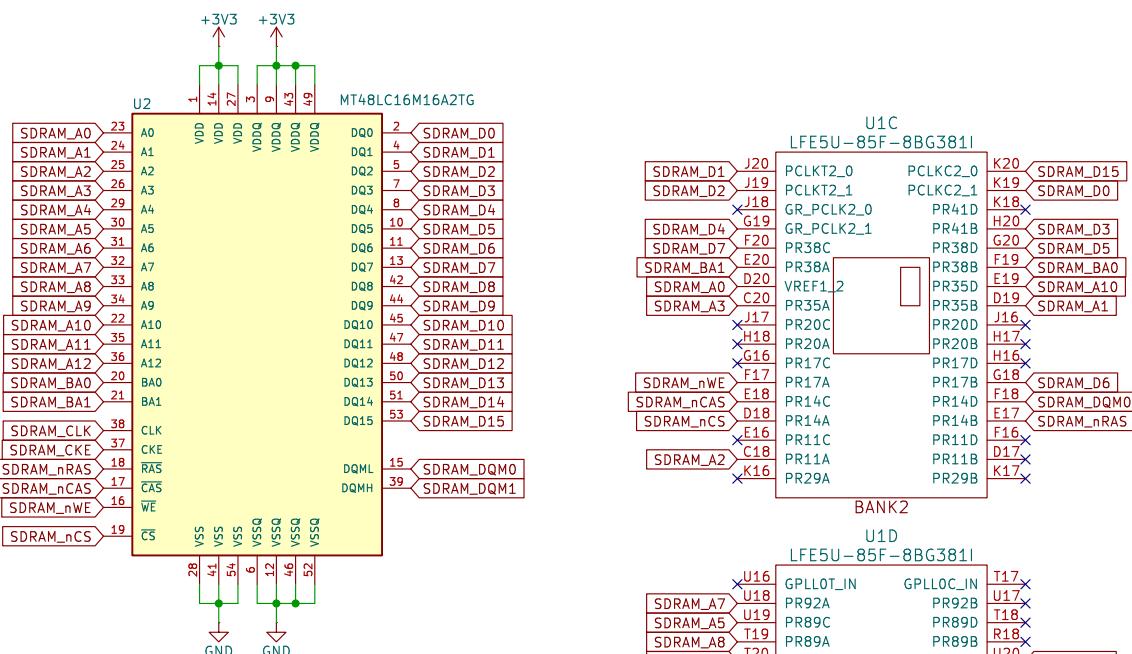

IS25LP128F SPI flash for FPGA bitstream storage. Directly connected to ECP5 configuration pins. Pullups on all SPI lines per Lattice guidelines. CFG pins set for Master SPI boot mode. PROGRAMn, DONE, and INITn signals for configuration control.

RAM MT48LC16M16A2TQ SDRAM (16-bit, 32MB). Connected to FPGA banks 2 and 3. Full address bus (A0–A12), 16-bit data bus, bank select, and control signals (RAS, CAS, WE, CS, CKE, CLK, DQM). Decoupling capacitors for clean power.

Sheet: /ram/

USB Micro-USB connector for power and programming. FT231XQ USB-to-serial chip with JTAG signals bit-banged over serial pins (CTS→TDO, DSR→TCK, DCD→TMS, RI→TDI). TX/RX activity LEDs. External 6-pin JTAG header as backup. 27Ω series resistors on USB data lines.
